

What are we working on in your neighborhood?

- We're exploring the possibility of installing a sewer main on Walnut Street from Western Avenue to Rogers Drive.
- Did you know that the City maintains a storm water system that contains 388,000 feet of main lines, 92,420 feet of laterals, 3922 catch basins/curb inlets and 1710 manholes?
- We're talking about the addition of school zone cameras to provide more driving safety.
- We're working on the Lower Castlerock Acquisition Project; acquiring a little over 30 acres of land for open space, habitat and trails at the end of Castlerock. The project is funded through donations and a state grant.
- We're working on a secondary fire access between Fifth Street and the Broadview area in coordination with trail planning with the Chelan-Douglas Land Trust.
- We're working with the Chelan-Douglas Land Trust on a Maiden Lane trailhead.
- We're planning for a street project that will include a signal at Maple Street and sidewalks along No. 2 Canyon Road.
- We're working on providing information on neighborhood fire safety in light of last year's fires.
- We'll be providing information on the benefits of being annexed into the City to receive sewer service, enhanced garbage service and a chance to participate in the future of the City!
